- 1. Heart scaffold**
- 2. Stomach scaffold**

A biological CAD platform: Heart scaffold

Control Panel

Identifier: mesh_generator

Mesh type: 3D Heart 1

Number of elements around LV free wall
5

Number of elements around RV free wall
7

Number of elements up LV apex
1

Number of elements up RV
4

Number of elements around atrial free wall
6

Number of elements around atrial septum
3

Number of elements inlet
2

Number of elements up atria
4

Number of elements around atrial septum
3

Number of elements around atrial free wall
6

Unit scale
1.0

Interventricular sulcus derivative factor
0.5

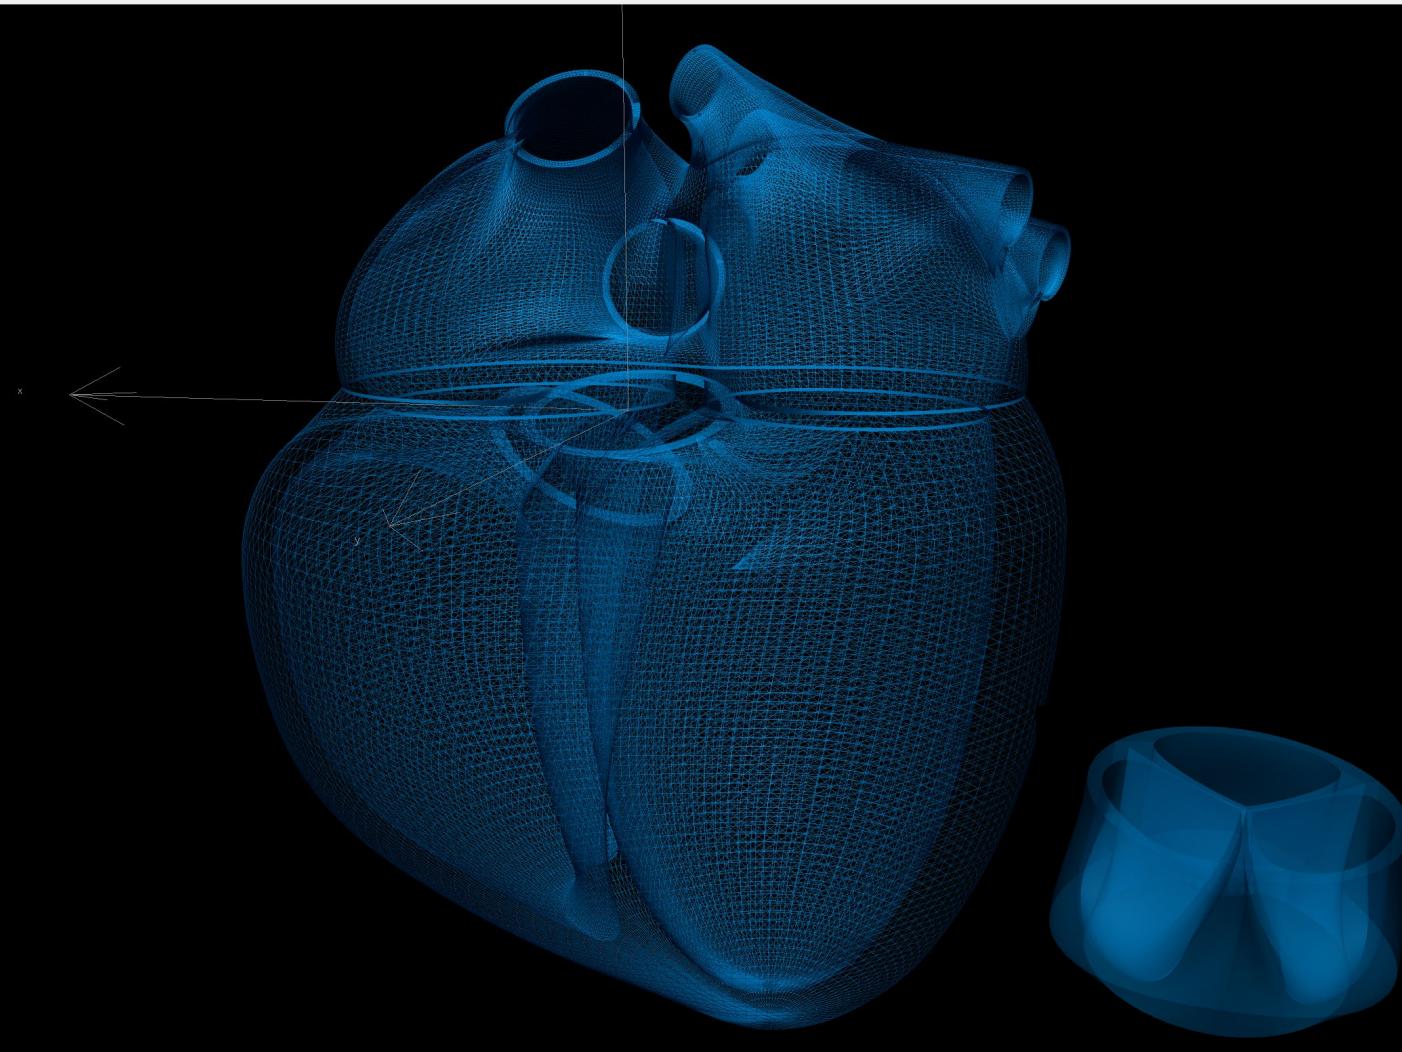

LV outer height
0.9

LV outer diameter
1.0

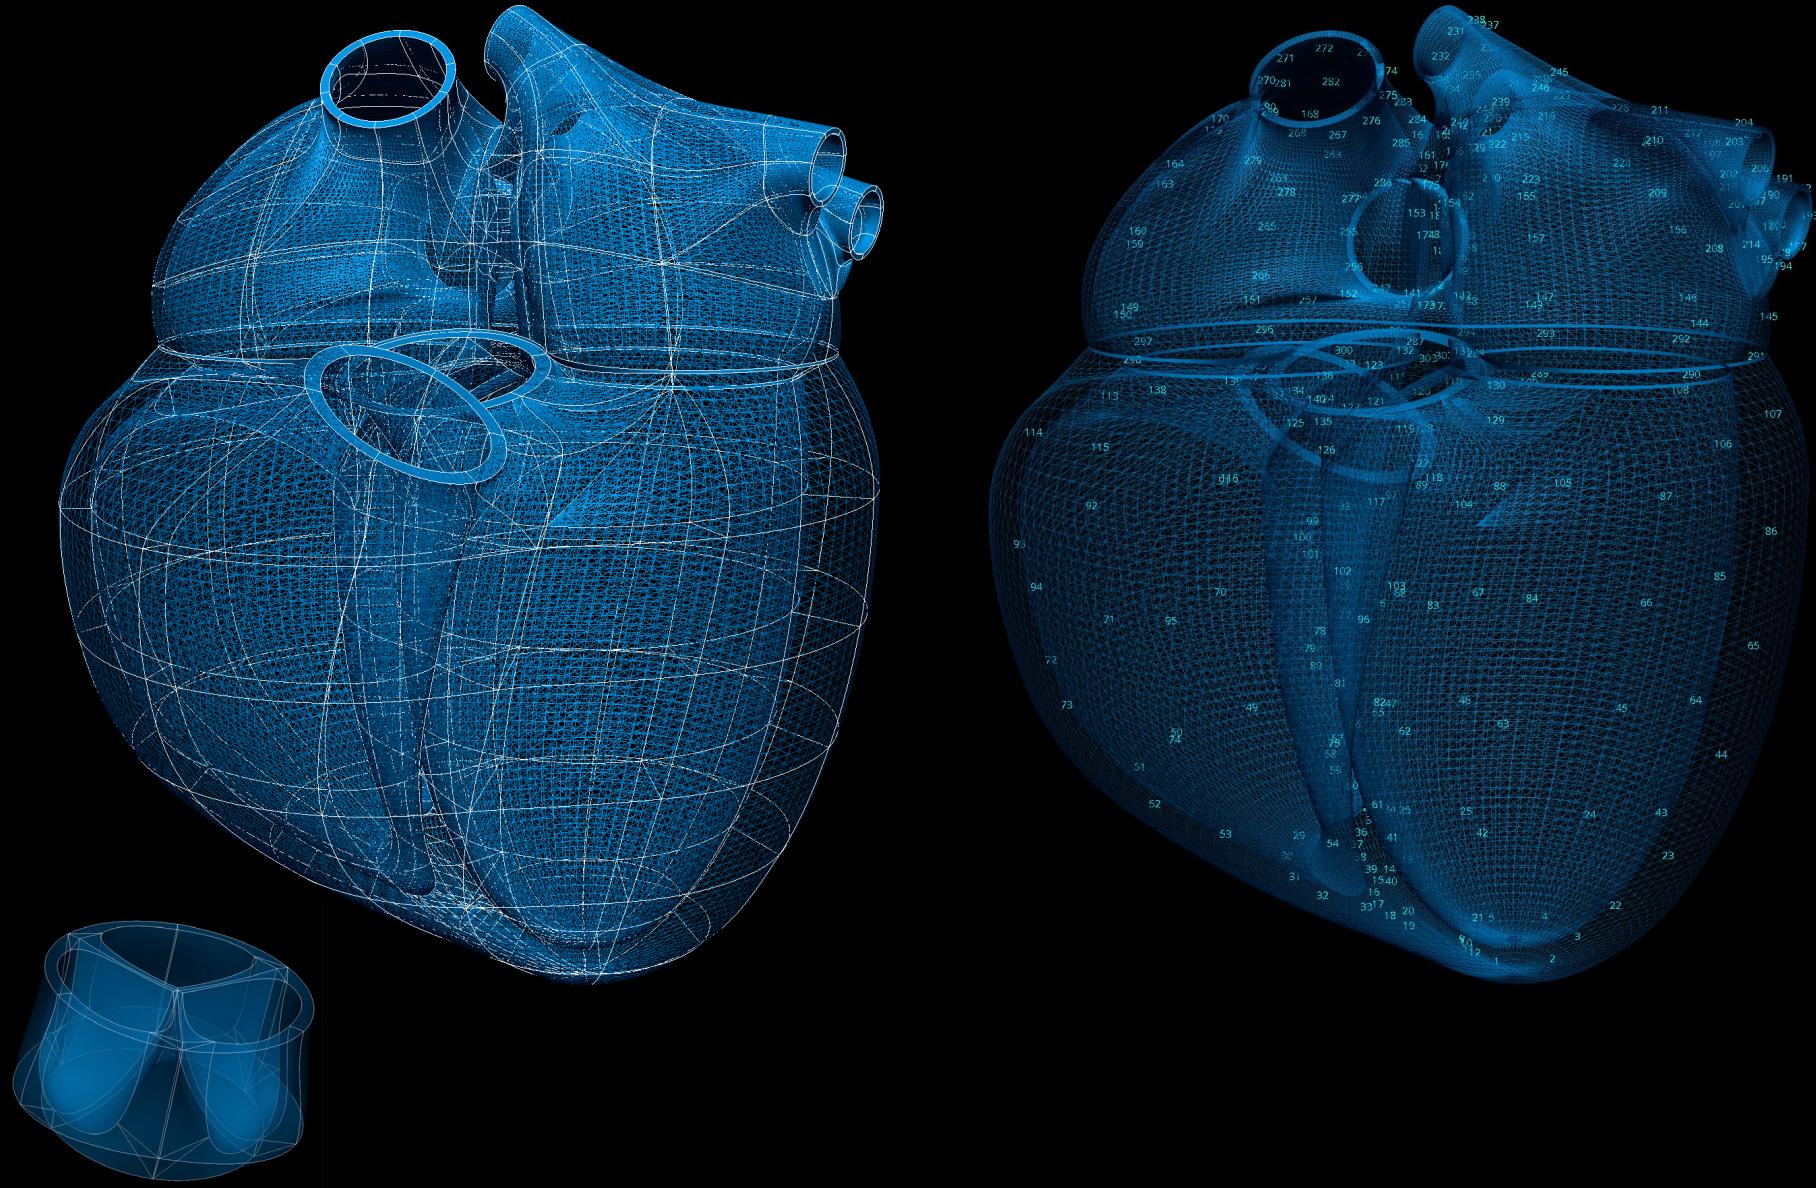

LV free wall thickness
0.12

Tricubic Hermite Elements establish the material coords

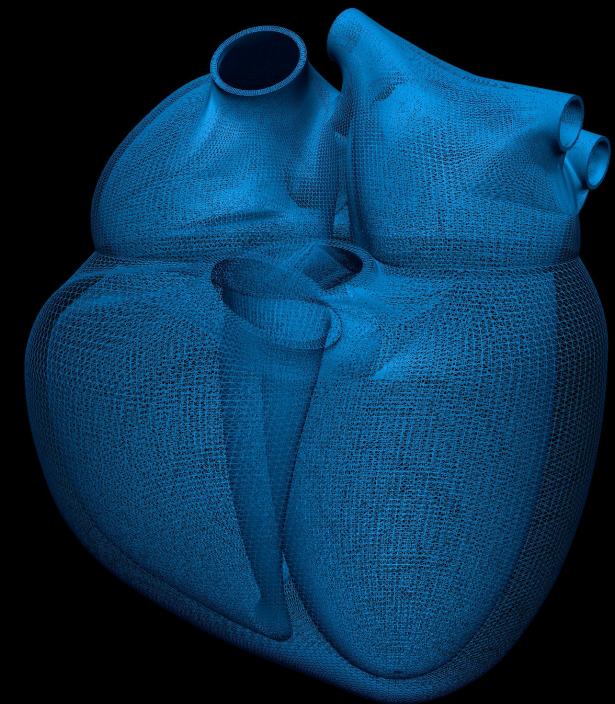

Material axes

Exporting meshes for simulation

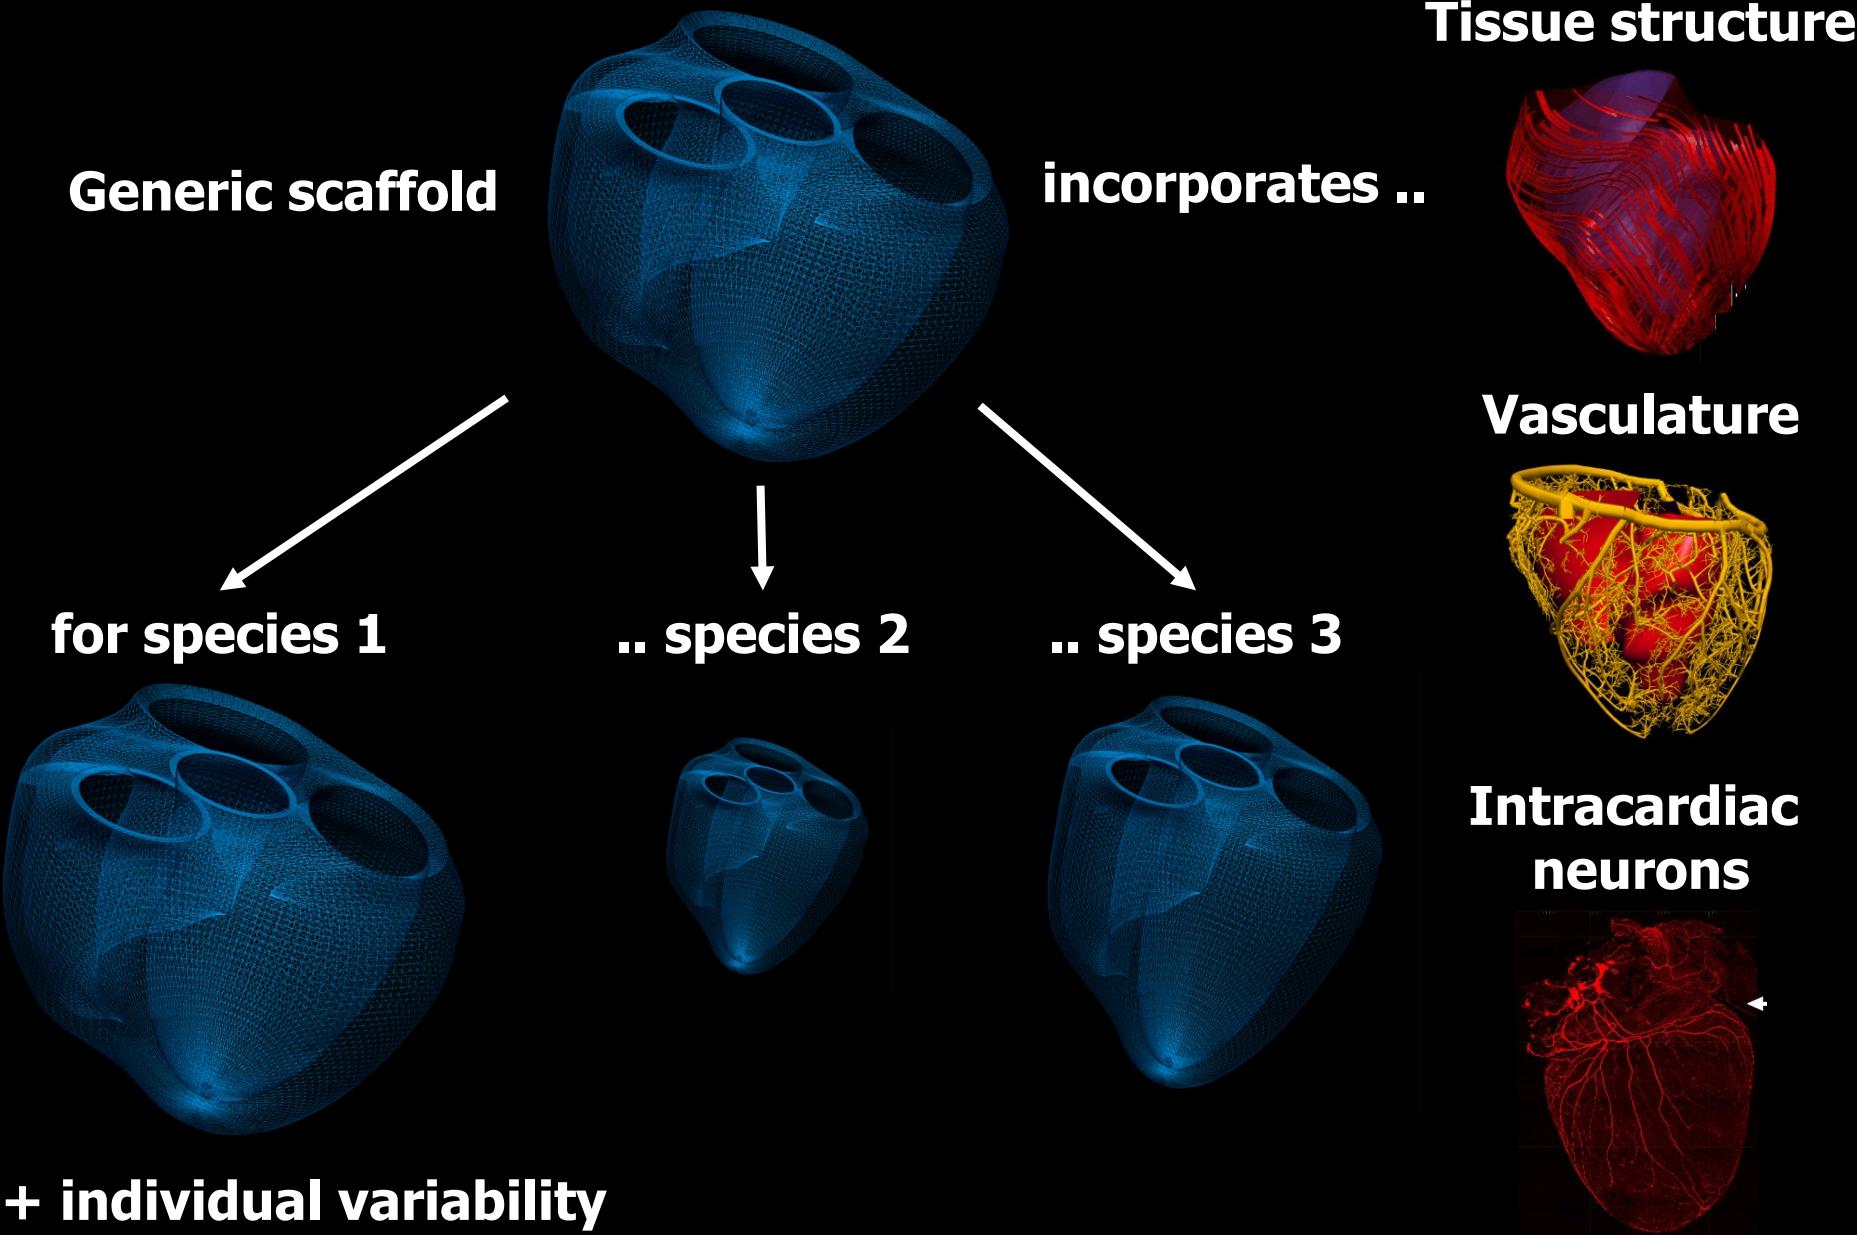

2x refinement

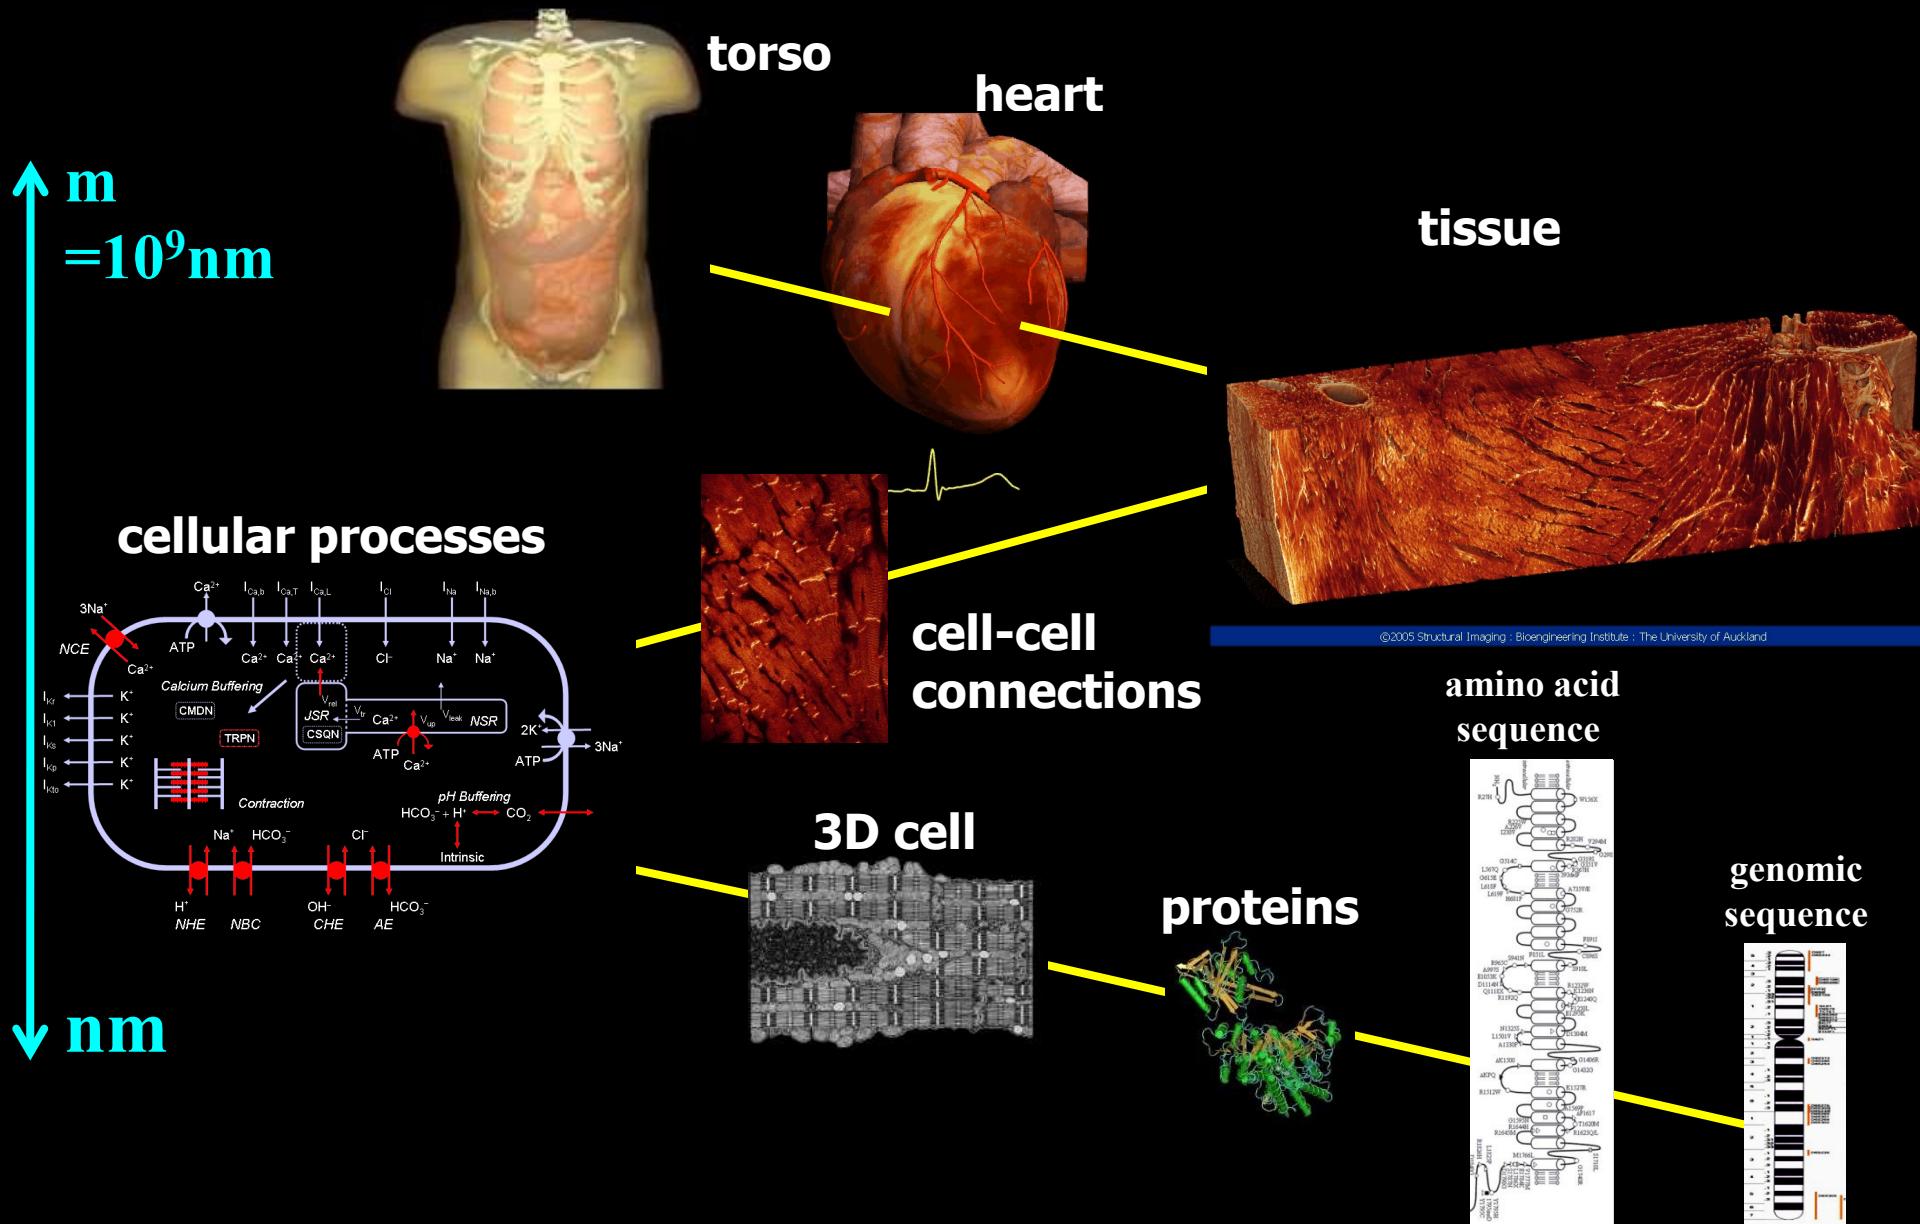

4x refinement

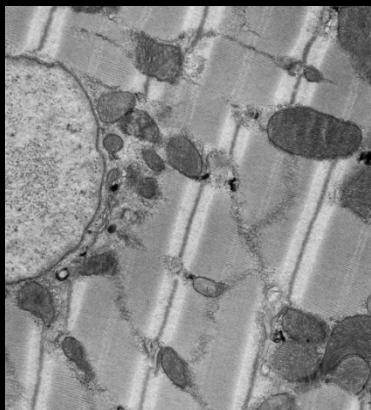

Species dependent scaffolds

The heart physiome

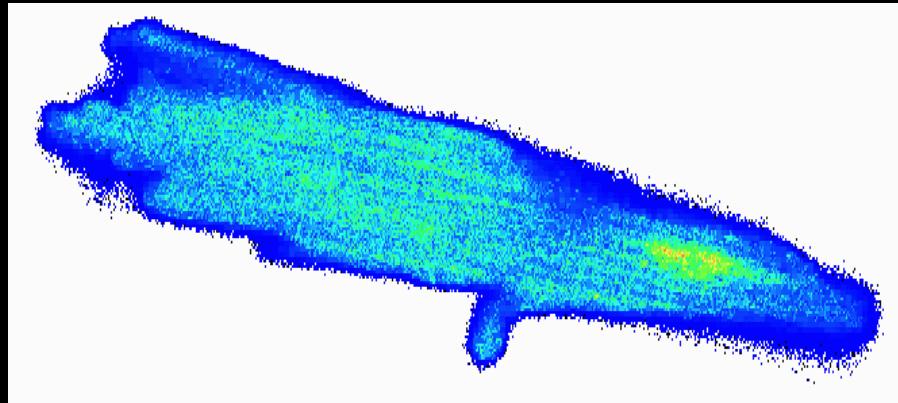

Molecular scale

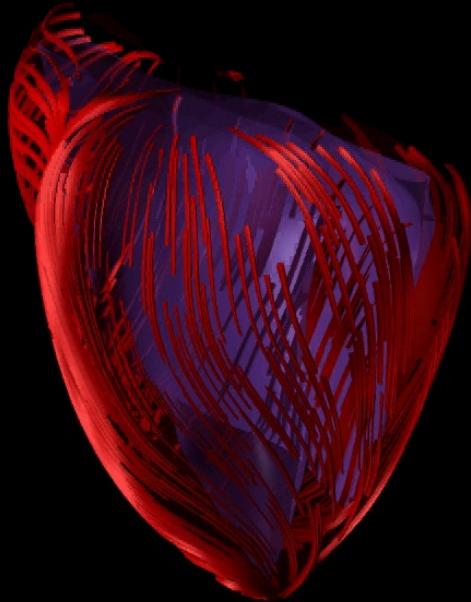

\leftrightarrow
 $2\mu\text{m}$

Cellular scale

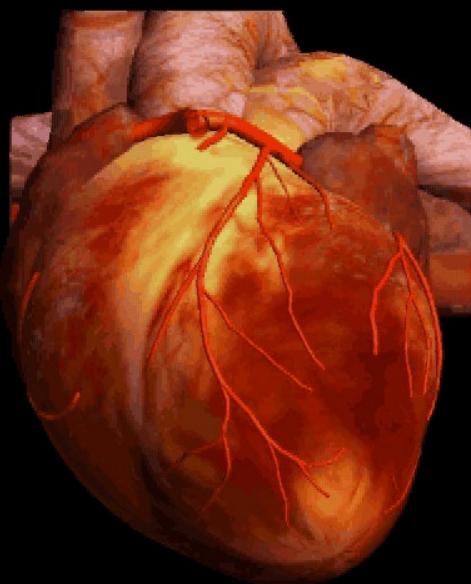

\leftrightarrow
 $100\mu\text{m}$

Tissue/organ scale

\leftrightarrow
 10mm

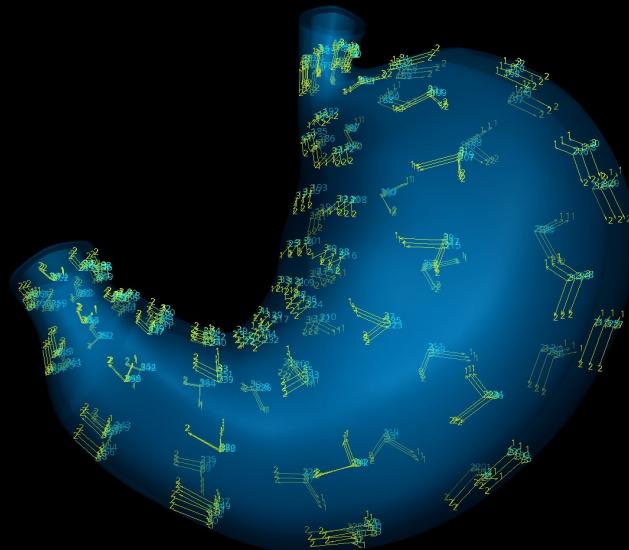

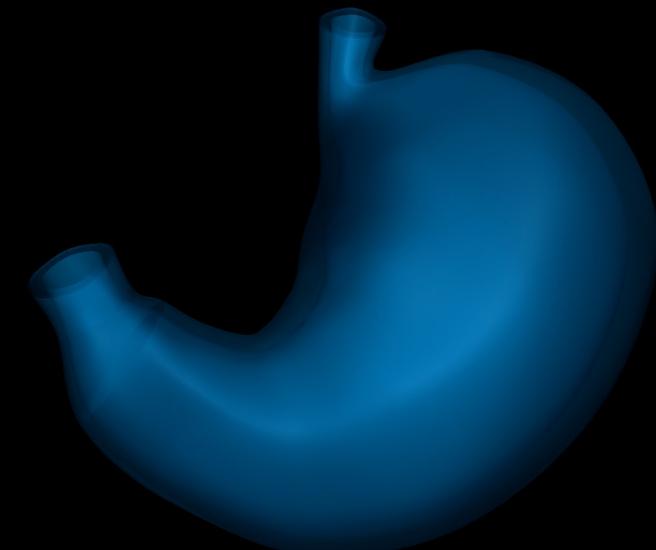

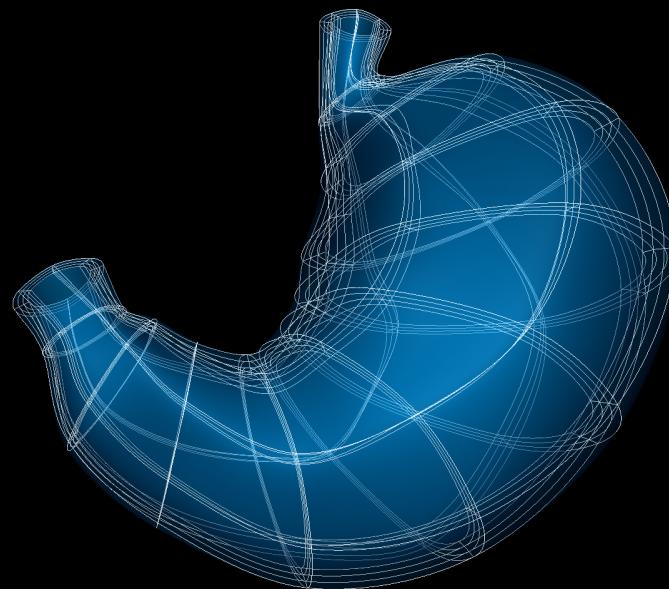

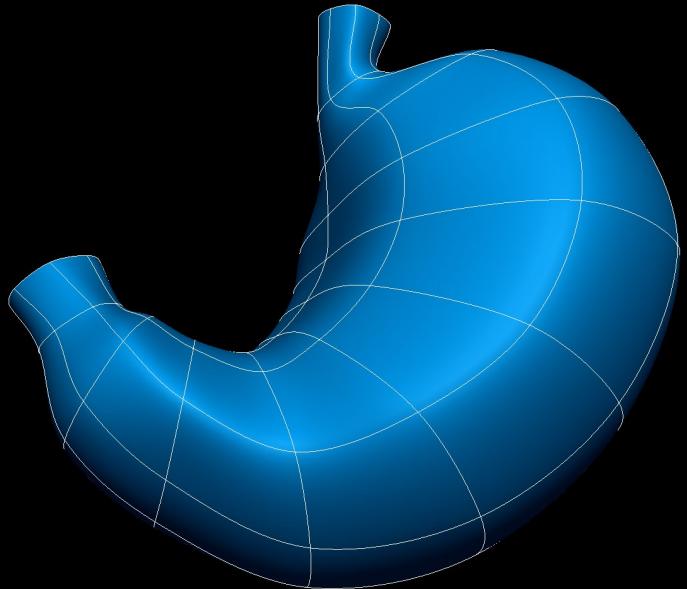

Clinical scale

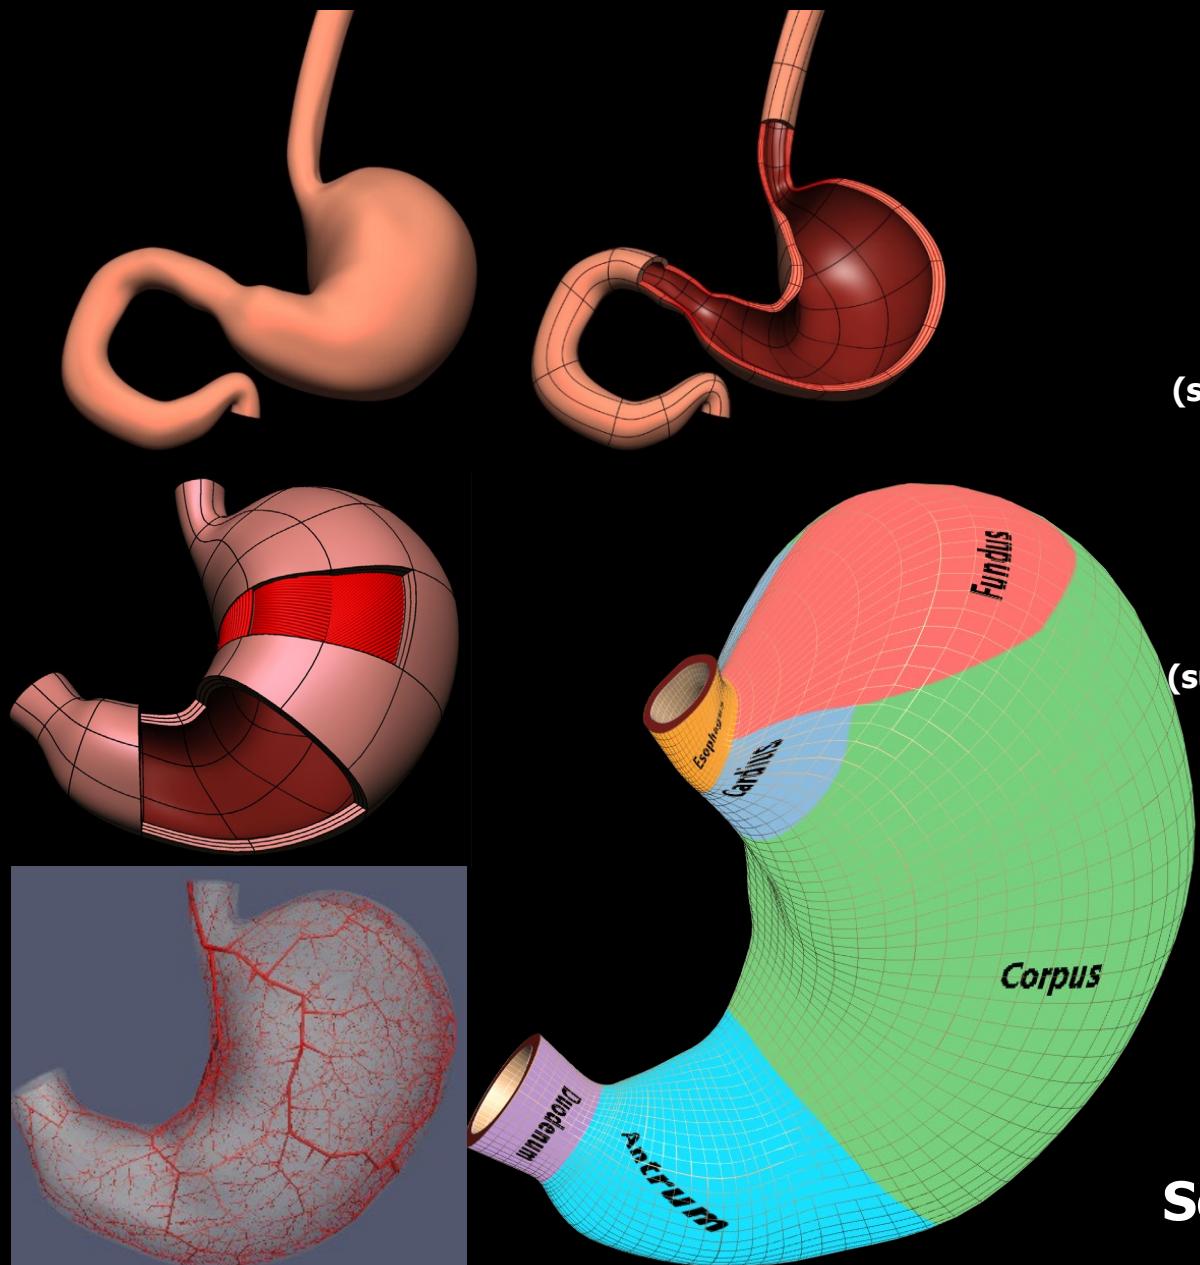

1. Heart scaffold
2. Stomach scaffold

Stomach scaffold

Structure & function in the stomach

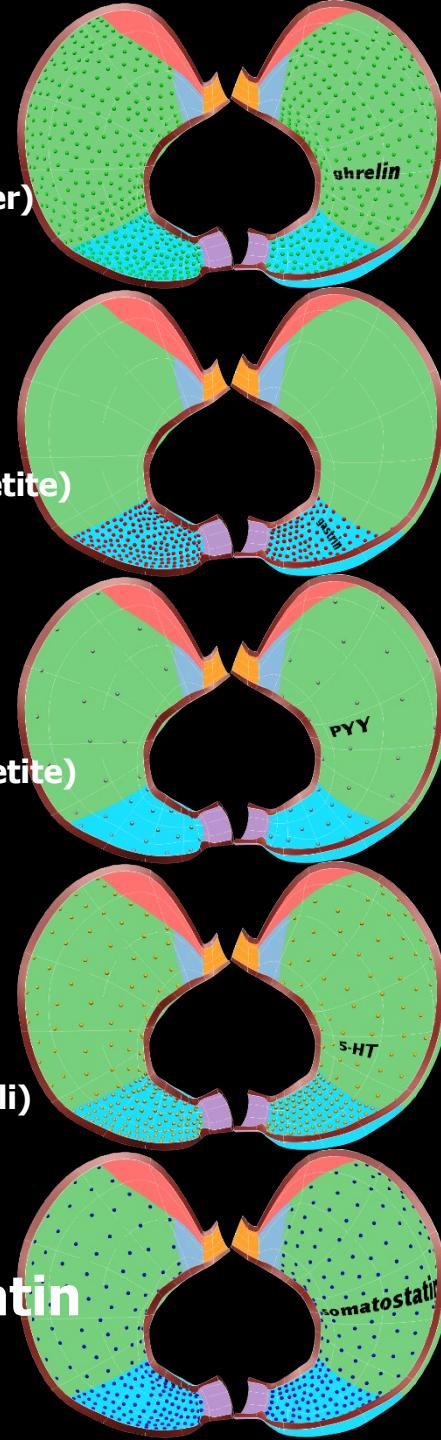

Ghrelin
(signals hunger)

Gastrin
(stimulates appetite)

PYY
(suppresses appetite)

5-HT
(responds to noxious stimuli)

Somatostatin
(pH control)

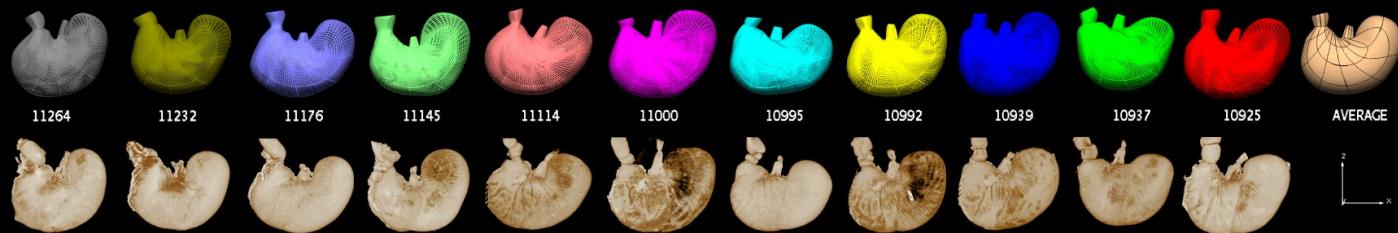

Mapping neurites in the stomach

Data from Terry Powley group at Purdue
